This study is an attempt to survey and better understand the socio-economic characteristics of refugees and asylum seeking populations in Egypt.

This study profiles the socio-economic characteristics of refugees and asylum seekers in Egypt. It is based on a nationally representative sample of 2,600 working-age refugees (aged 15–64), drawn from the UNHCR registry of refugees and asylum seekers. The survey was conducted by phone from 17 November to 9 December 2021.
