The world is experiencing an unprecedented acceleration in technological advancement and implementation. Indeed, profound shifts are taking place – entire sectors are accommodating these innovations, rendering several human-performed occupations redundant. In the near future, these positions may be eliminated entirely. At the same time, other jobs are experiencing a rapid increase in demand, and some occupations are revising the skill sets they traditionally require. This report seeks to understand the implication of computerized technology for five Asian economies - Cambodia, Indonesia, the Philippines, Thailand and Viet Nam - by assessing types of occupations that have a high probability of being automated.
