Within the project 'Reimagining Education for Marginalized Girls and Boys during and post COVID-19' ILO and Smart Lab created video tutorials for TVET teachers on how to easily produce interactive training content for E-Learning.

ILO has cooperated with Smart Lab, a Sarajevo-based company specialized in E-Learning products, within the frame of the project 'Reimagining Education for Marginalized

Girls and Boys during and post COVID-19'. This framework project involved many UN partners, like UNESCO, UNICEF and UN Volunteers. One of its results are 7 short tutorial videos explaining and guiding through the production of E-Learning materials, multimedia training content, with a freely available or low-cost software. The URL directs to the first of the tutorials, which is part of a playlist, where all of them can be found. In these videos, people working at Smart Lab explain different steps in the creation of the E-Learning content in a way which is easy to follow. While the target group of these videos are teachers in TVET, the ultimate beneficiaries are TVET students, as their education will get more engaging and flexible.
